# **Computer Literacy Program (CLP)**

## **CCC Success Story**

Jyoti Swami, a student under the Course on Computer Concepts (CCC) initiative of the Computer Literacy Program of NSS, BITS Pilani, cleared the CCC Exam conducted by NIELIT (under MeitY, Government of India) in June 2025.

Course on Computer Concepts (CCC) is an online, objective-type exam conducted monthly by NIELIT (National Institute of Electronics and Information Technology) in India. The 90-minute exam has 100 questions worth 1 mark each, with no negative marking, and requires a minimum of 50% to pass. Jyoti was tutored by CLP volunteers throughout the Academic Year 2024-25, according to the exam syllabus prescribed by NIELIT. This included a basic introduction to computers, operating systems, word processors, spreadsheets, presentations, as well as an overview of the Internet and web communication. CLP's CCC classes took place in the Pilani Atmanirbhar Resource Centre (PARC), and the medium of instruction was both English and Hindi.

CCC empowers individuals to confidently handle digital tasks, use basic software and the internet, and apply for roles such as data entry operators, clerks, and office assistants. For many government job opportunities in this sector, CCC not only offers exceptionally helpful information but is often a mandatory requirement. Around 7–8 lakh students appear for the various Digital Literacy Programs (including CCC) offered by NIELIT. After months of preparation, Jyoti travelled to Jaipur for the CCC exam and cleared it in her first attempt.
